About Me

I develop in Go and C++, 3rd year student of Applied Mathematics and Computer Science at Kosygin State University of Russia. I build microservices in Go (REST API, NATS, PostgreSQL, Redis) and work with Docker and Linux. Looking for a Junior Go Developer position or an internship in backend development.

Projects

Search Engine

Go, Docker

- A microservice search system: web crawler, BM25 indexing service, REST API in Go
- Task queues via Redis, data storage in PostgreSQL and Meilisearch
- Deployed on Yandex Cloud via Docker Compose at search.koftamainee.ru
- Architecture designed for horizontal microservice scaling

Mantle

C++, Vulkan

- A modular game engine with Vulkan renderer and Frame Graph for automatic GPU synchronization
- Custom memory management system (arena, tlsf allocators)
- ECS architecture integration (flecs) and physics engine (Jolt Physics)
- CI/CD with auto-builds for Linux and Windows

Mint / Mintload

Rust, C

- Asset pipeline for a game engine: converts glTF/GLB to binary formats for direct GPU upload
- Scene system with text (.mscn) and binary (.mscb) formats, incremental builds
- Mintload — a C library for fast file loading via mmap (with C++ wrapper)

Other

[Chalkboard](#) — a C++20 library for rendering LaTeX formulas with hot-reload.

[Danmaku](#) — a bullet hell game engine in pure C with Lua scripting (SDL3).

Skills

Languages: C, C++, Go, Rust, Lua, Python

Tools: Git, CMake, Docker, Docker Compose, Linux, CI/CD

Databases: PostgreSQL, Redis, NATS

Other: Vulkan, Nginx, REST API

English: B2 (Upper-Intermediate)

Education

Kosygin State University of Russia, Moscow

Applied Mathematics and Computer Science, 3rd year (2024–2028)
